Question 1:

get the first name and last name from the user and print the length of the full name.

Question 2:

convert the full name to upper case using upper() method, (the syntax is variable.upper()).

Question 3:

1. Ask the user to enter their first name and store it in a variable called 'first_name'.
2. Ask the user to enter their last name and store it in a variable called 'last_name'.
3. For the 'first_name', convert only the first letter to uppercase.
4. For the 'first_name', convert all letters starting from the second letter (index 1) to lowercase using the .lower() method.
5. For the 'last_name', convert only the first letter to uppercase.
6. For the 'last_name', convert all letters starting from the second letter (index 1) to lowercase using the .lower() method.

Print the modified first name and last name as a full name.

Question 4:

print the below paragraph in two lines:

“Good things happen at the "blue" lake.

That's what Alice's grandmother says.”
